1 Description

This model simulates canine atrial action potentials. The model's formulation is based on the Luo-Rudy II guinea-pig ventricular model with currents modified to mimic the configuration of canine atrial action potential.

Abstract excerpt: *"To obtain insights into the ionic mechanisms governing canine atrial AP properties, we incorporated formulations of $K(+)$, $Na(+)$, $Ca(2+)$, and $Cl(-)$ currents, based on measurements in canine atrial myocytes, into a mathematical model of the AP."*
