

CESE platform compatible Simucore model libraries

Table of contents

1 Stock model libraries.....	2
2 Technical requirements for running Simucore models.....	2

1 Stock model libraries

We provide a collection of popular electrophysiological models, based upon the [Simucore architecture](#), that are ready to run under the respective CESE environment. Please note that due to the unique model solver implementation in CESE Plus platform, models designed for one system will not function within the other CESE environment. Select the CESE platform that you are interested in below, to access the appropriate compatible model library:

- [Enhanced Simucore model library for CESE Plus](#) [new!]
- [Simucore model library for CESE OSS](#)

To request custom-designed products, services, and support, or request further information please visit our [services](#) or [support](#) pages, or [contact us](#).

2 Technical requirements for running Simucore models

In order to run Simucore stock or custom cell models, you require an installed version of one of the CESE platforms. See our [CESE platform](#) product offering for clarification on the available systems. Please feel free to [contact us](#) for further information, to obtain a competitive quotation, or to discuss how Simulogic may be able to support your research program.
